

## Mega Altherma Indoor unit ESP curve

### Notes

- The ESP curves are the maximum ESP curves for different  $\Delta T$  types (pump rpm=4000 for  $\Delta T=5^\circ\text{C}$ ; pump rpm=3600 for  $\Delta T=10^\circ\text{C}$ ).  
The pump of the indoor unit is inverter-controlled and functions to have a fixed  $\Delta T$  between the return water temperature and the leaving water temperature.
- In case of installing a domestic hot water tank, there is an additional pressure drop over the 3-way valve (delivered as an accessory with the tank).

ESP: External Static Pressure  
Flow: water flow through the unit

### Warning

- Selecting a flow outside the operating area can damage the unit or cause the unit to malfunction.  
See also the minimum and maximum allowed water flow range in the technical specifications.
- Water quality must be according to EU directive 98/83 EC.
