Notes

- Measured according to ISO3744
- Reference acoustic intensity $0dB = 10E-6\mu W/m^2$
- dBA=A-weighted sound power level

- Unit condition: $T_a=7/6^{\circ}C$ - Heating setpoint $70/80^{\circ}C$ - Maximum compressor frequency

- If sound is measured under actual installation conditions, the measured value will be higher due to environmental noise and sound reflections. Choose the installation location carefully and do not install in a sound sensitive environment (e.g. living room, bedroom, . . .)
