Heating capacity at maximum operating frequency, measured according to EN 14511.

Symbols

AFR: Air flow rate [m³/min]

BF: Bypass factor

EWB: Entering wet-bulb temperature (°C WB)

EDB: Entering dry-bulb temperature (°C DB)

TC: Total capacity [kW]

SHC: Sensible heat capacity [kW]

PI: Power input [kW]

Notes

- 1) The bold cells indicate the standard conditions.
- 2) The capacities are based on the following conditions:
Corresponding refrigerant piping length: -5 m
Level difference: 0-m
- 3) The air flow rate and bypass factor are mentioned in the table.
- 4) The ratings shown are net capacities which include a deduction for indoor fan motor heat.
- 5) The total capacity, power input and sensible heat capacity must be calculated by interpolation, using the figures in the table (figures not in the table may not be used in the calculation).
